

Infyslate Offerings

Infyslate is dedicated to pioneering transformative solutions that redefine industries and unlock unprecedented value.

The Infyslate Advantage: Why Infyslate

“Your challenges deserve custom answers"

We start by truly understanding your problem statement delving into your requirements, workflows and pain points. Then, backed with feasibility check, we design and develop tailored features using AI that directly solve your unique challenges. This isn't just about customization; it's about creating a solution that fits your business like a glove.

Market Potential

Enterprises are aggressively investing in AI to reduce costs, improve efficiency, and gain a competitive edge.

AI Automation

Intelligent systems learn continuously from data, adapting to business workflows and optimizing performance over time..

Business Impact

Companies adopting AI see 30–60% cost reduction, faster turnaround times, and dramatically improved operational visibility.

INFYSLATE

Decoding Complexity: Infyslate’s technical AI offerings

At Infyslate, we specialise in developing bespoke AI models designed to tackle the most intricate business challenges. Our approach integrates advanced algorithms with deep domain expertise.

- Machine Learning optimisation for predictive analytics.
- Natural Language Processing for enhanced data understanding.
- OCR for intelligent automation and insights.
- Analytics Capabilities

Our AI offerings

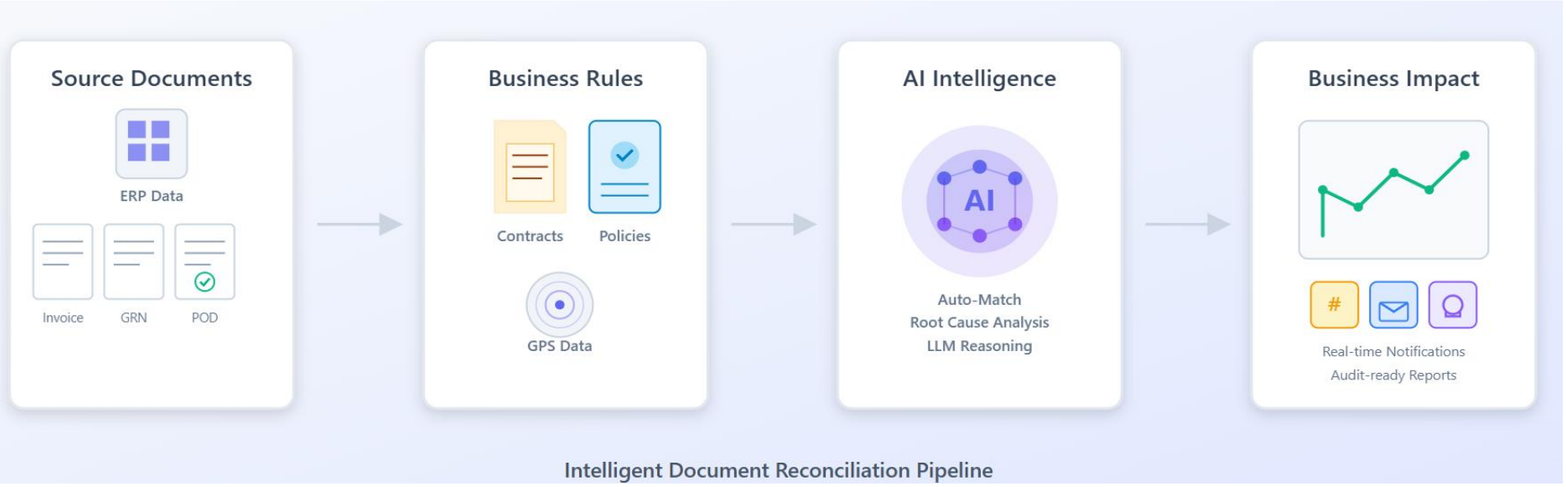

AI Reconciliation Assistant

Problem statement :

Reconciliation is always difficult for both Domestic/IE shipments and can cost companies heavily when bills and penalty charge sheets aren’t validated properly.Today, data is scattered and manual checks lead to errors and delayed decisions.There is no system that validates everything accurately and identifies the true root cause behind each mismatch.

Our Approach :

We can use AI to automatically read and match data across invoices, GRNs, ASNs, GPS and penalty sheets, even when formats are messy or unstructured and use LLM reasoning to explain exactly why each mismatch or penalty occurred, giving a clear, audit-ready root cause and integrate with slack/teams/mail for real time insights

Impact

- Reduction in overbilling.
- 70–90% reduction in manual effort.
- Faster vendor payment cycles

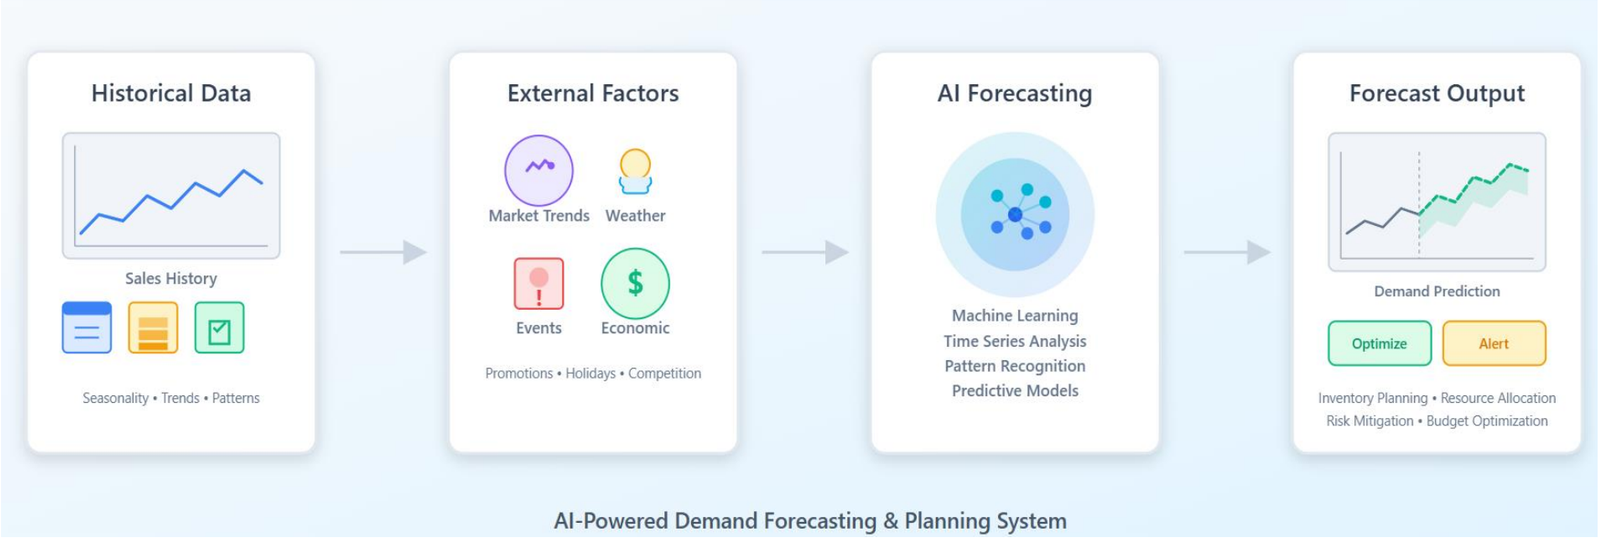

Demand Forecasting

Problem statement :

• Businesses struggle with stockouts, overstocking, and inaccurate planning due to unpredictable demand and inaccurate demand systems with lack of explainability.
• Traditional forecasting fails to capture seasonality, promotions, holidays, and fast-changing customer behavior.
• This leads to lost sales, blocked working capital, and inefficiency across the supply chain

Our Approach :

• AI models learn from historical sales, seasons, promos, external signals, and macro trends to predict demand accurately.
• The system generates SKU-level forecasts and replenishment recommendations in real time.
• Continuous learning ensures accuracy improves over time as new patterns emerge.

Impact

- 40% reduction in stockouts
- 15–25% lower inventory holding costs
- More reliable planning, higher revenue

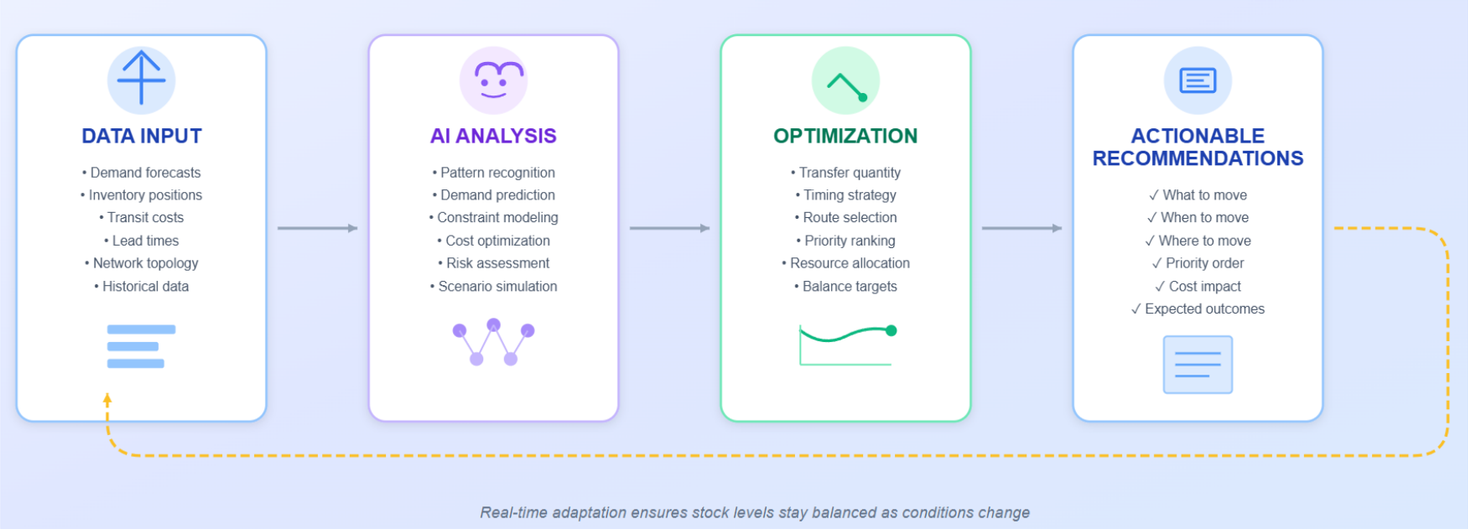

Stock Transfer Optimization

Problem statement :

- Stores and warehouses often face uneven inventory — shortages in some locations and excess in others.
- Manual transfer decisions don't account for real-time demand, lead times, or logistics cost.
- This leads to high carrying cost, lost sales, and inefficient stock movement across the network.

Our Approach :

- AI analyzes demand, inventory position, transit cost, and lead time across every node.
- It recommends the optimal transfer plan—what to move, when to move, and where to move.
- Continuous monitoring ensures stock levels stay balanced as conditions change.

Impact

- 40% lower logistics and carrying cost
- Fewer stockouts and faster product availability
- Improved service levels and higher ROI

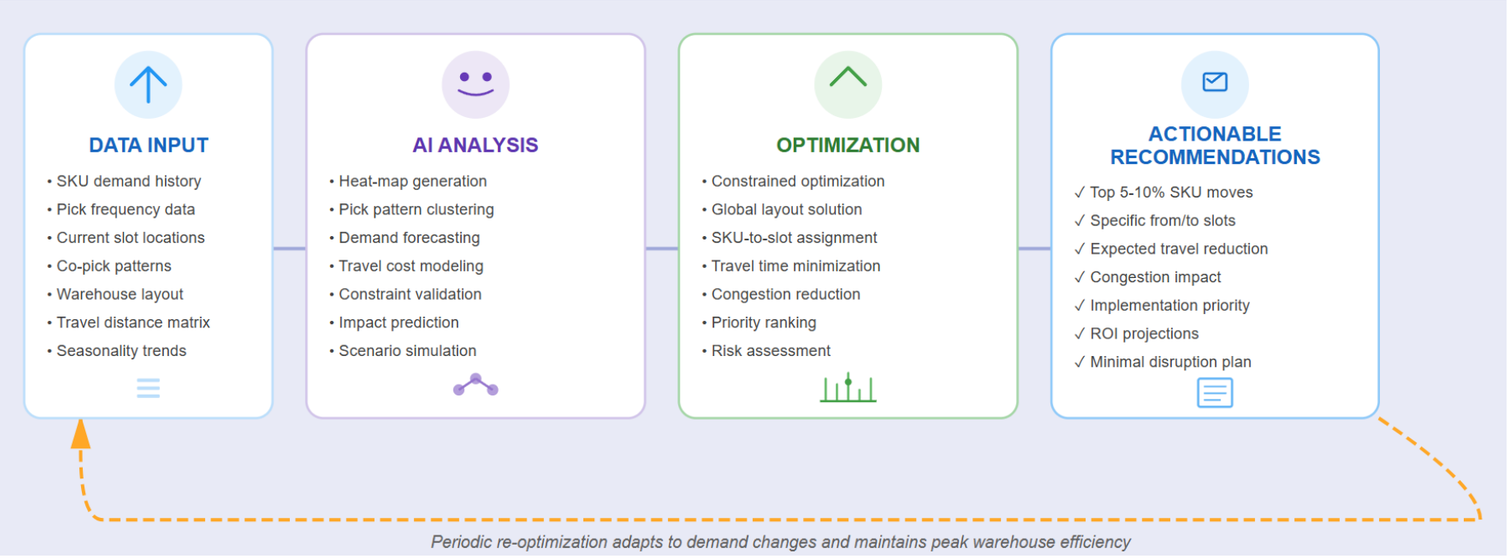

Dynamic Slotting & Heat-Mapping Optimization

Problem statement :

- Warehouse layouts become inefficient as demand, seasonality, and promotions change over time.
- Fast-moving and frequently co-picked SKUs drift away from optimal pick zones.
- Re-slotting the entire assortment is operationally expensive, time-consuming, and risky.
- As a result, most warehouses tolerate inefficiencies rather than attempt large-scale rearrangements.
- This leads to unnecessary picker travel, congestion, and slower order fulfillment — hidden but persistent costs.

Our Approach :

- We compute the globally optimal warehouse layout using constrained optimization and quantify the impact of every possible SKU move.Only the top 5–10% highest-benefit SKU moves are recommended, each backed by measurable reductions in travel time and congestion.
- This delivers maximum efficiency improvement with minimal disruption, and is re-run periodically to stay aligned with demand changes.

Impact

- 15–30% reduction in picker travel
- No large-scale re-slotting or downtime
- Continuous improvement without operational shock

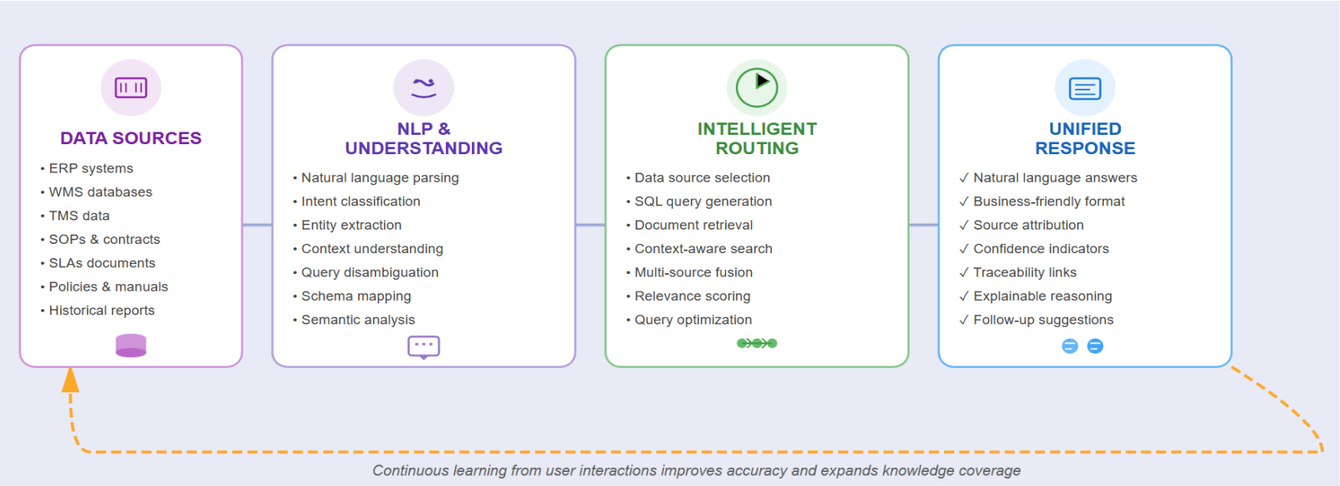

AI Query Hub

Problem statement :

- Supply-chain insights are split across structured systems (ERP, WMS, TMS) and unstructured documents (SOPs, SLAs, contracts) with no unified access layer.
- Business users cannot query data directly and depend on data engineers due to complex schemas, joins, and SQL requirements.
- Critical operational knowledge is buried in scattered documents, with no semantic search or real-time context.
- As a result, natural-language business questions go unanswered or delayed, leading to slow decisions, low data adoption, and hidden operational risk.

Our Approach :

- Introduce an AI-driven conversational layer that understands natural-language questions and identifies whether the answer lies in structured databases, unstructured documents, or both.
- Apply context-aware reasoning engines to dynamically generate database queries or retrieve relevant document sections, without requiring users to know schemas or file locations and to deliver unified, explainable responses by business-friendly answers with traceability.

Impact

- Reduction in data querying time
- Reduction in analytics turnaround time

Let's Innovate Together: Connect with Infyslate Today Today

Ready to transform your business with cutting-edge AI? Reach out to our team to discuss your specific needs and explore how Infyslate AI can chart a new future for your enterprise.
