

Infyslate Offerings

Infyslate is dedicated to pioneering transformative solutions that redefine industries and unlock unprecedented value.

The Infyslate Advantage: Why Infyslate

“Your challenges deserve custom answers"

We start by truly understanding your problem statement delving into your requirements, workflows and pain points. Then, backed with feasibility check, we design and develop tailored features using AI that directly solve your unique challenges. This isn't just about customization; it's about creating a solution that fits your business like a glove.

Market Potential

Enterprises are aggressively investing in AI to reduce costs, improve efficiency, and gain a competitive edge.

AI Automation

Intelligent systems learn continuously from data, adapting to business workflows and optimizing performance over time..

Business Impact

Companies adopting AI see 30–60% cost reduction, faster turnaround times, and dramatically improved operational visibility.

INFYSLATE

Decoding Complexity: Infyslate’s technical AI offerings

At Infyslate, we specialise in developing bespoke AI models designed to tackle the most intricate business challenges. Our approach integrates advanced algorithms with deep domain expertise.

- Machine Learning optimisation for predictive analytics.
- Natural Language Processing for enhanced data understanding.
- OCR for intelligent automation and insights.
- Analytics Capabilities

Our AI offerings

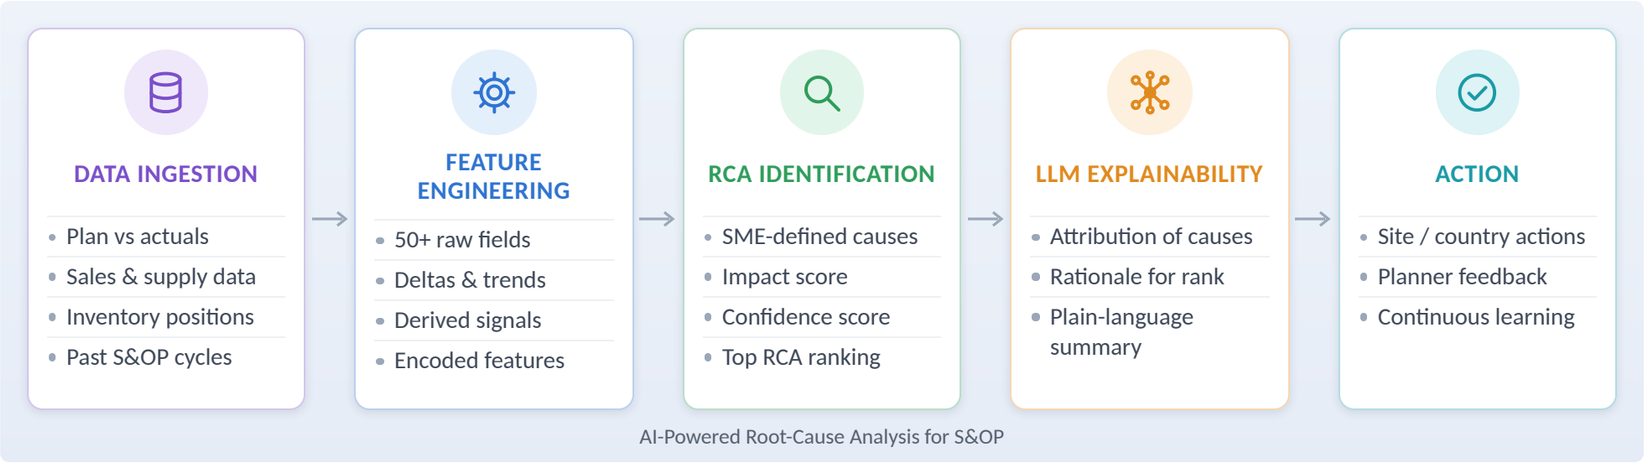

Intelligent S&OP Root-Cause Analyzer

Problem statement :

- Root-cause analysis for S&OP plan deviations is manual, slow and reactive, relying on spreadsheets and expert judgement.
- Corrective actions arrive late or target the wrong drivers, so the same misses repeat cycle after cycle.
- Opportunities to mitigate future demand, supply and inventory risks are lost.

Our Approach :

- Engineer 50+ signals (deltas, trends, variances) from planning, sales and supply data across every S&OP cycle.
- Rank candidate root causes with an impact and confidence score, combining mathematical models with LLM reasoning.
- Generate explainable, country/site-level corrective actions, with planner feedback continuously improving accuracy.

AI-Powered Root-Cause Analysis for S&OP

Impact

- RCA accuracy doubled (24% → 47%) in a single cycle
- Targeting 70%+ root-cause accuracy
- Major reduction in manual analysis effort
- Proactive risk mitigation

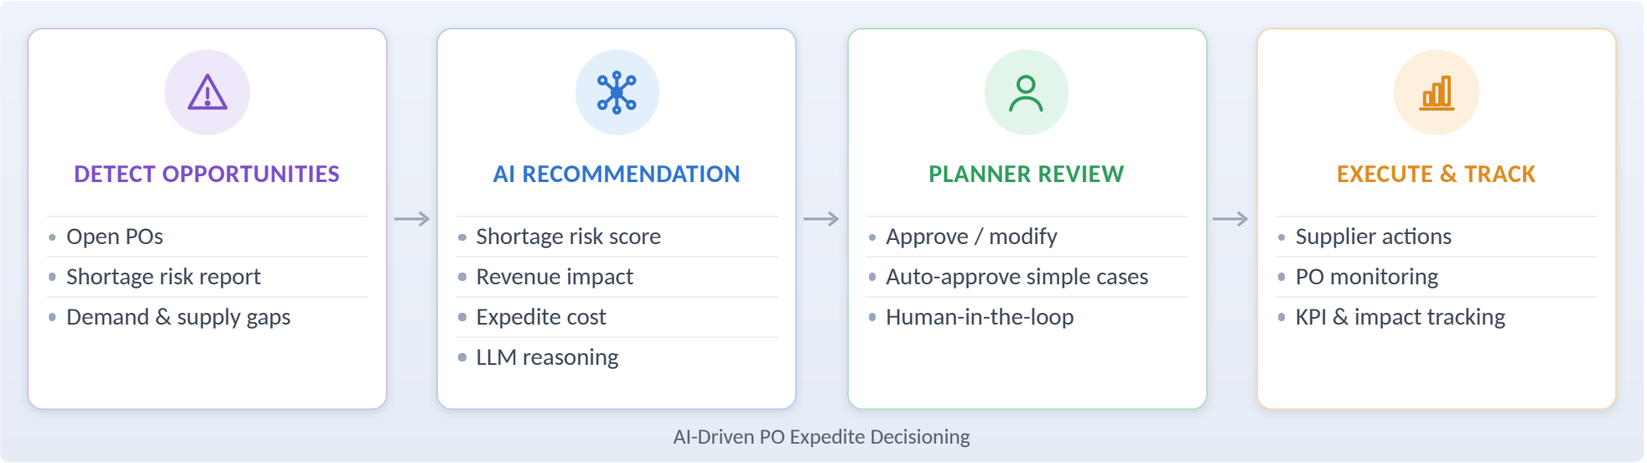

AI PO Expedite Advisor

Problem statement :

- Purchase Order expedite decisions are manual, spread across multiple tools and dependent on individual planner judgement.
- Limited analytics means only a small fraction of expedite opportunities are ever acted on (as low as 5%).
- Shortages go unaddressed, hurting on-time delivery, revenue and customer service.

Our Approach :

- AI continuously scans open POs and shortage reports to detect expedite opportunities.
- Each case is scored on shortage risk, revenue impact and expedite cost; simple cases are auto-approved and LLM reasoning explains complex ones.
- Planners review, approve or modify in a simple UI (human-in-the-loop), and every action is tracked for impact.

AI-Driven PO Expedite Decisioning

Impact

- Shortage actions taken up from 5% to 30%
- ~20% less planner effort (target 50%)
- 80% AI decision acceptance rate
- >90% on-time delivery in live scope

AI Negotiation Copilot

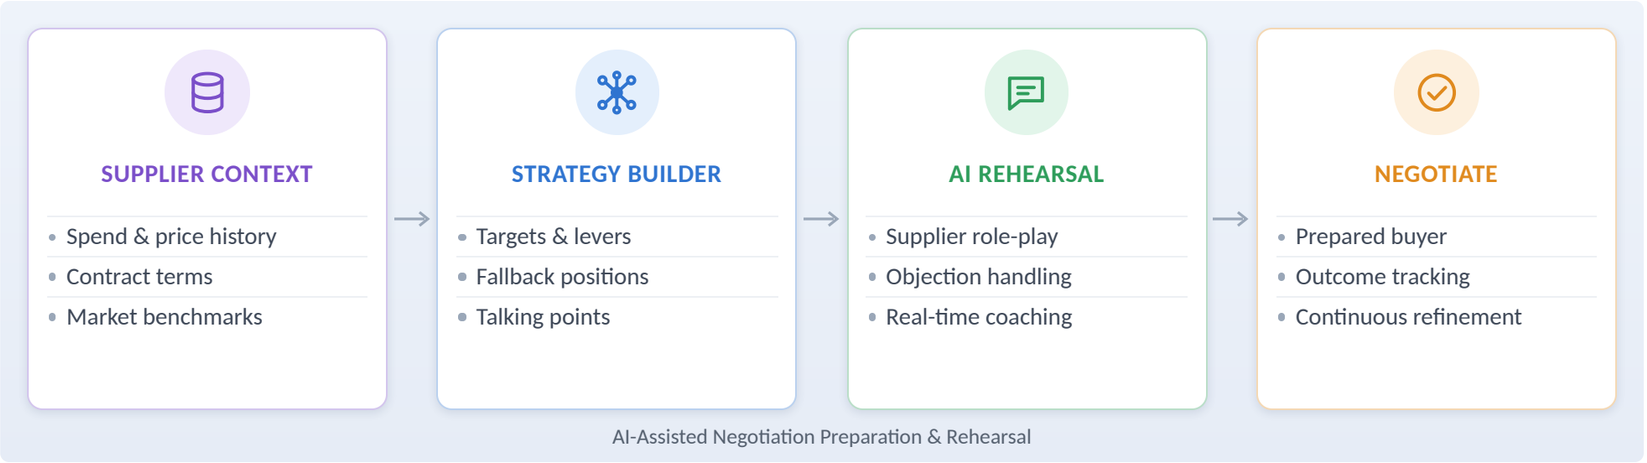

INFYSLATE

Problem statement :

- Procurement buyers have limited time to prepare structured negotiation strategies, especially for long-tail suppliers.
- Preparation quality varies from buyer to buyer, and there is no safe way to rehearse before a supplier meeting.
- This leaves savings on the table and makes negotiation outcomes inconsistent.

Our Approach :

- AI analyses supplier spend, price history, contract terms and market context to draft a negotiation strategy: targets, levers and fallback positions.
- Buyers rehearse with an AI that role-plays the supplier and gives feedback on arguments, tone and concessions.
- Designed to plug into procurement platforms, with a live in-meeting assistant on the roadmap.

AI-Assisted Negotiation Preparation & Rehearsal

Impact

- Better negotiated outcomes
- Faster negotiation preparation
- Consistent approach across buyers
- Coverage of long-tail suppliers

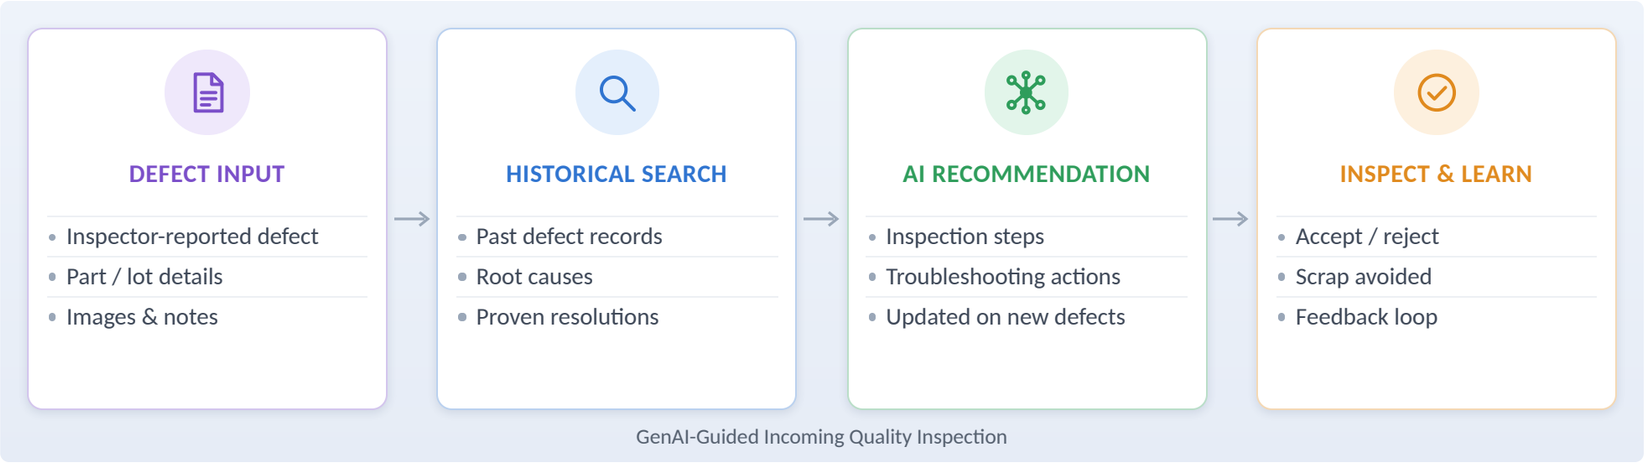

Smart Incoming Quality Inspection

Problem statement :

- Incoming quality checks for electronic components and assemblies (e.g. PCBAs) depend heavily on a few expert inspectors.
- Inspection steps are static and do not reflect recently observed defects.
- Defects slip through or are caught late, driving high scrap and rework costs.

Our Approach :

- A GenAI assistant takes the defect reported by the inspector and searches historical defect and resolution records.
- It generates accurate, step-by-step inspection and troubleshooting actions, continuously refreshed with the latest defects.
- Site quality owners govern adoption daily, and the solution scales to new sites and product lines.

GenAI-Guided Incoming Quality Inspection

Impact

- ~€690K estimated annual scrap savings
- Lower scrap and rework
- Less reliance on expert inspectors
- Inspection steps always up to date

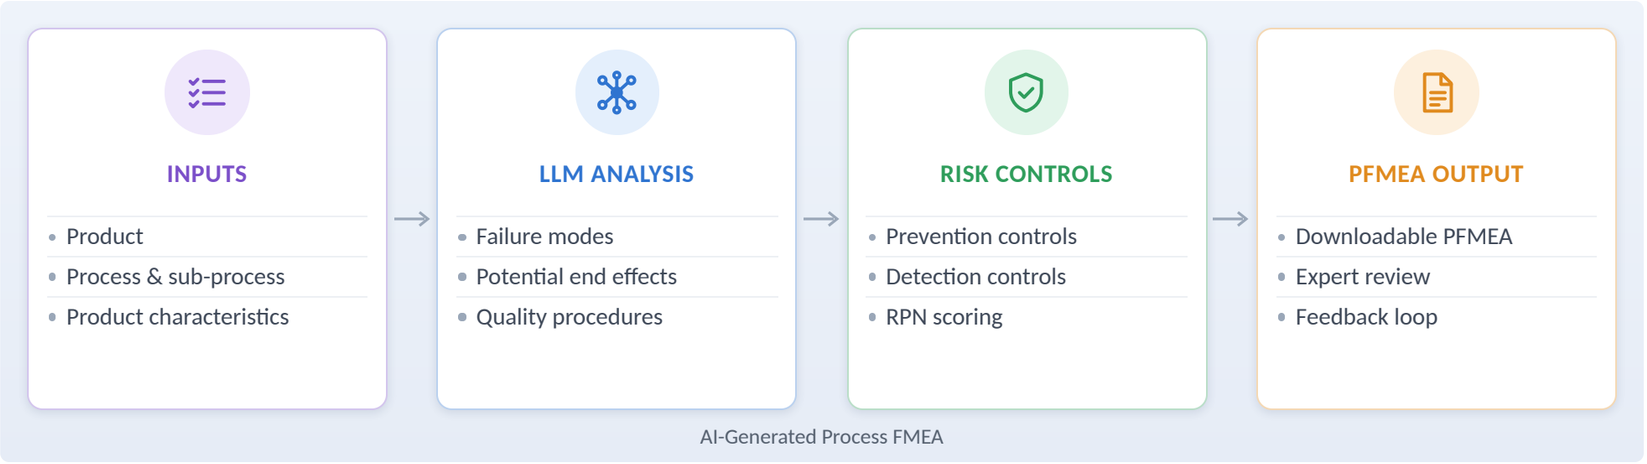

AI PFMEA Advisor

Problem statement :

- Process FMEA creation depends heavily on individual expertise and takes significant engineering time.
- PFMEAs vary in completeness and accuracy from plant to plant and expert to expert.
- Unchecked, these gaps can lead to quality issues, warranty returns and safety concerns for customers.

Our Approach :

- Engineers describe the product, process, sub-process and characteristics; the AI generates failure modes and potential end effects.
- The LLM proposes prevention and detection controls and RPN scoring, aligned to the organisation's quality procedures.
- Output is a downloadable, standardised PFMEA, improved through continuous and batch feedback from quality teams.

Impact

- +30% more risks identified
- 560+ PFMEA documents generated
- Standardised PFMEA quality across plants
- Fewer quality issues and returns

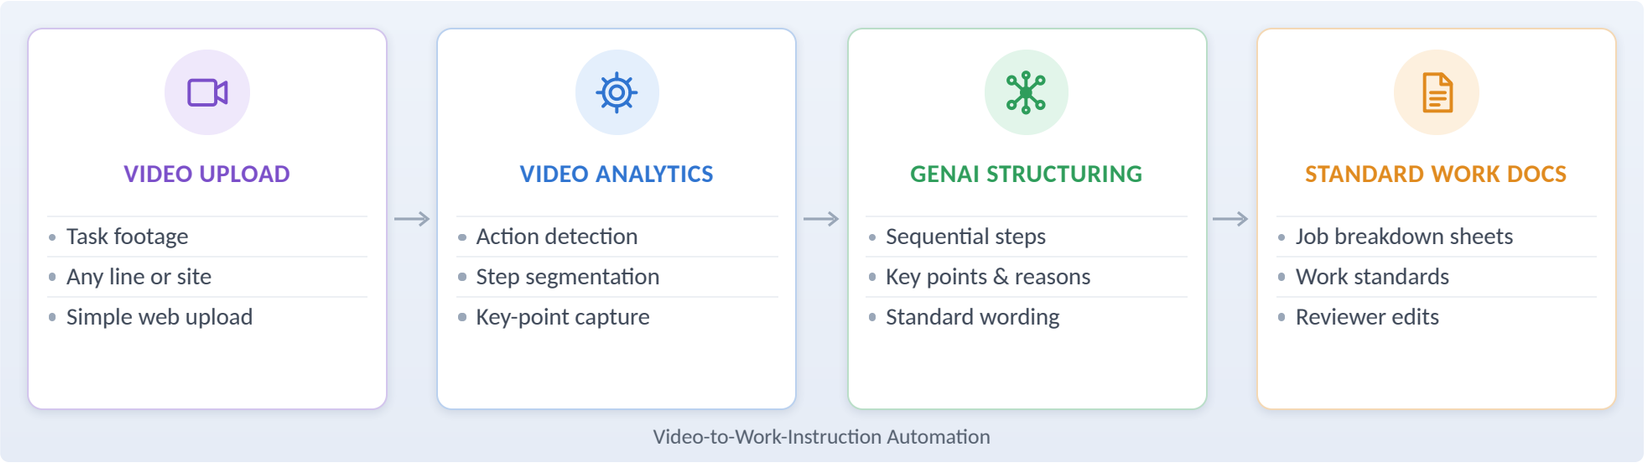

AI Work Instruction Generator

Problem statement :

- Creating standard work documents (job breakdown sheets, work standards, SOPs) is manual and labour-intensive.
- Documentation lags behind actual shop-floor practice and varies between lines and sites.
- Engineering time is spent writing documents instead of improving processes.

Our Approach :

- Operators or engineers upload a video of the task being performed.
- Video analytics and GenAI detect and extract the sequential key steps, key points and reasons.
- Steps are populated automatically into standard work templates, with reviewers editing only where needed.

Video-to-Work-Instruction Automation

Impact

- 85% step-extraction accuracy
- 465+ processes automated
- Rolled out across 45+ sites
- Hours of manual documentation saved

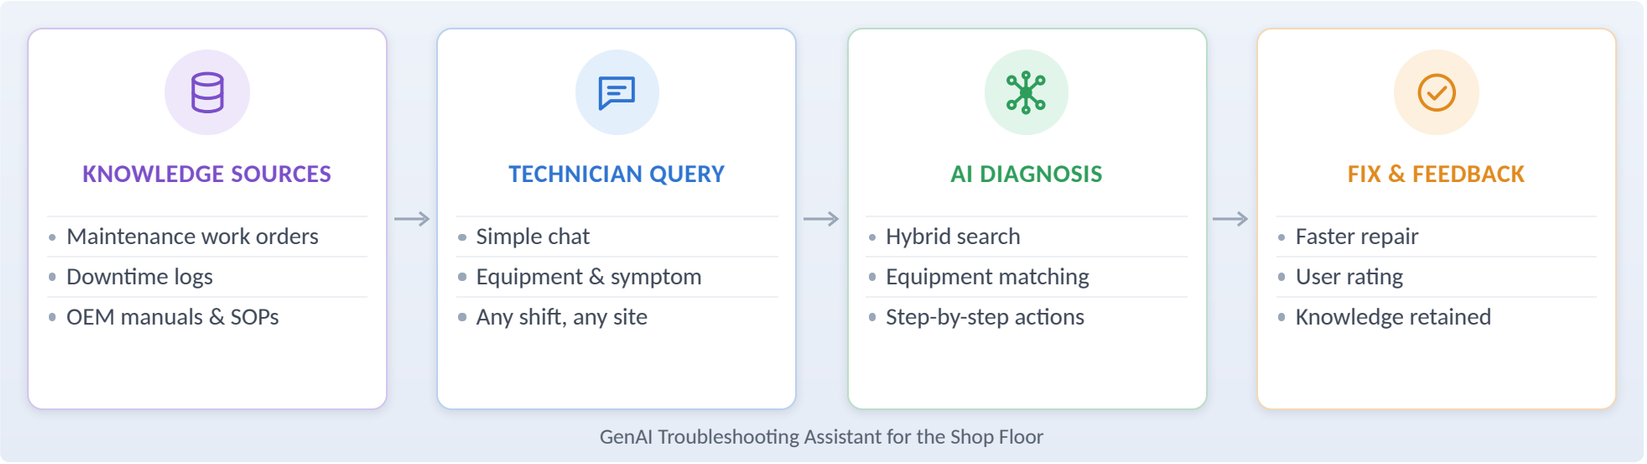

AI Maintenance Advisor

Problem statement :

- Critical maintenance expertise sits with a few experienced engineers and is largely undocumented.
- Technicians rely on trial-and-error, leading to longer repair times and inconsistent fixes.
- Past resolutions and OEM knowledge are hard to access and do not travel across shifts, sites or regions.

Our Approach :

- Ingest historical work orders, downtime logs, OEM manuals and SOPs into a searchable knowledge base.
- Technicians chat with the advisor; hybrid search and equipment matching surface step-by-step diagnostic actions.
- Real-time user feedback continuously improves recommendation quality as the solution scales to new sites.

Impact

- 85% success rate on AI-recommended fixes
- Reduced mean time to repair (MTTR)
- Scaled across 15+ plants in 4 regions
- Expertise retained across shifts

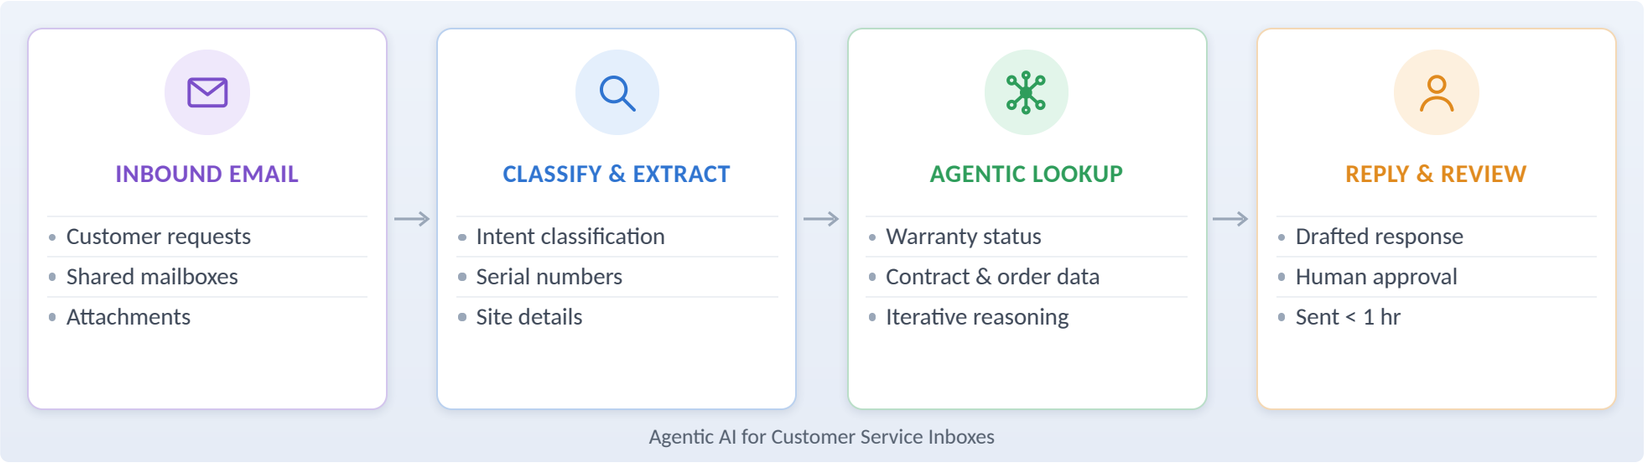

Agentic Customer Service Assistant

Problem statement :

- Customer service teams manually triage high volumes of inbound customer emails.
- Repetitive requests require manual look-up of serial numbers, warranty status and site details.
- Response times vary with workload and availability, creating delays for customers.

Our Approach :

- An autonomous AI agent reads, classifies and extracts key details from every inbound customer email.
- It looks up warranty, contract and order data and drafts accurate, context-aware replies.
- A human-in-the-loop reviews replies before sending; the pattern extends to after-sales and order intake with ERP integration.

Agentic AI for Customer Service Inboxes

Impact

- Customer responses in under 1 hour
- Large cut in manual email triage
- Faster acknowledgement and follow-up
- Reusable for after-sales & order intake

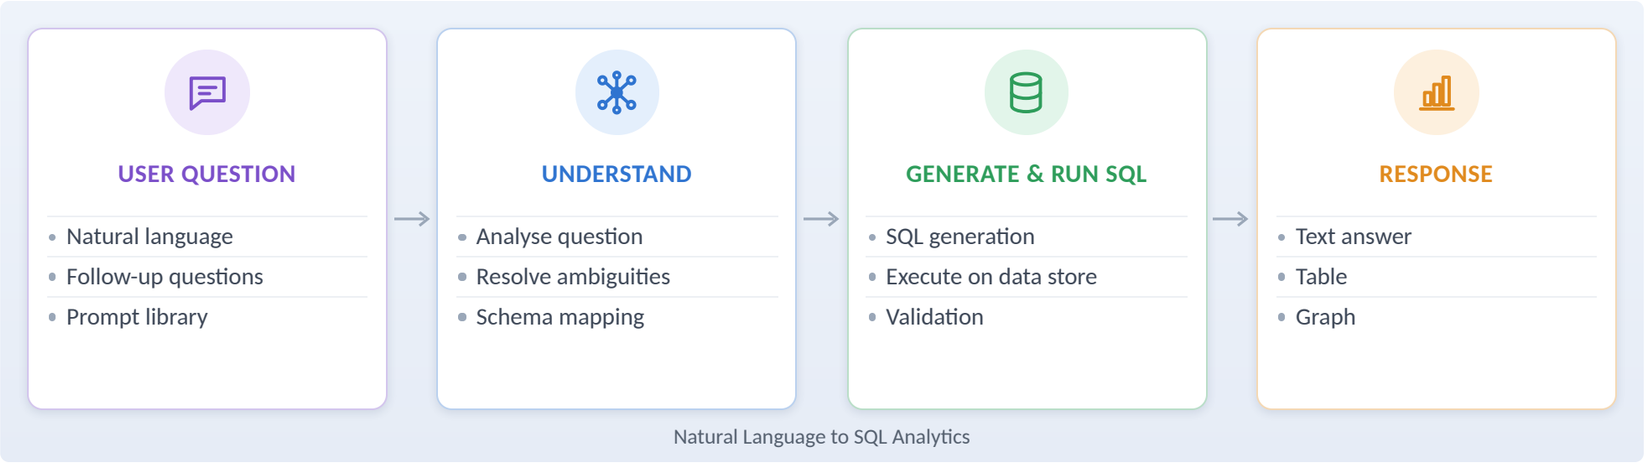

Conversational Data Insights

Problem statement :

- Getting information for decisions is hard due to complex data structures, ambiguous relationships and too many dashboards.
- Business users depend on analysts with SQL and BI skills for even simple questions.
- Answers take days instead of minutes, slowing down supply-chain decisions.

Our Approach :

- A GenAI chatbot lets users ask questions in natural language, resolving ambiguities before answering.
- Questions are translated into SQL, executed on the enterprise data store and returned as text, tables or charts.
- Supports follow-up questions, user profiles and preferences, a prompt library and conversation summaries with action items.

Natural Language to SQL Analytics

Impact

- >90% answer accuracy
- Average response under 15 seconds
- Less dependency on analysts
- Reusable across procurement, manufacturing & finance data

Enterprise Knowledge Assistant

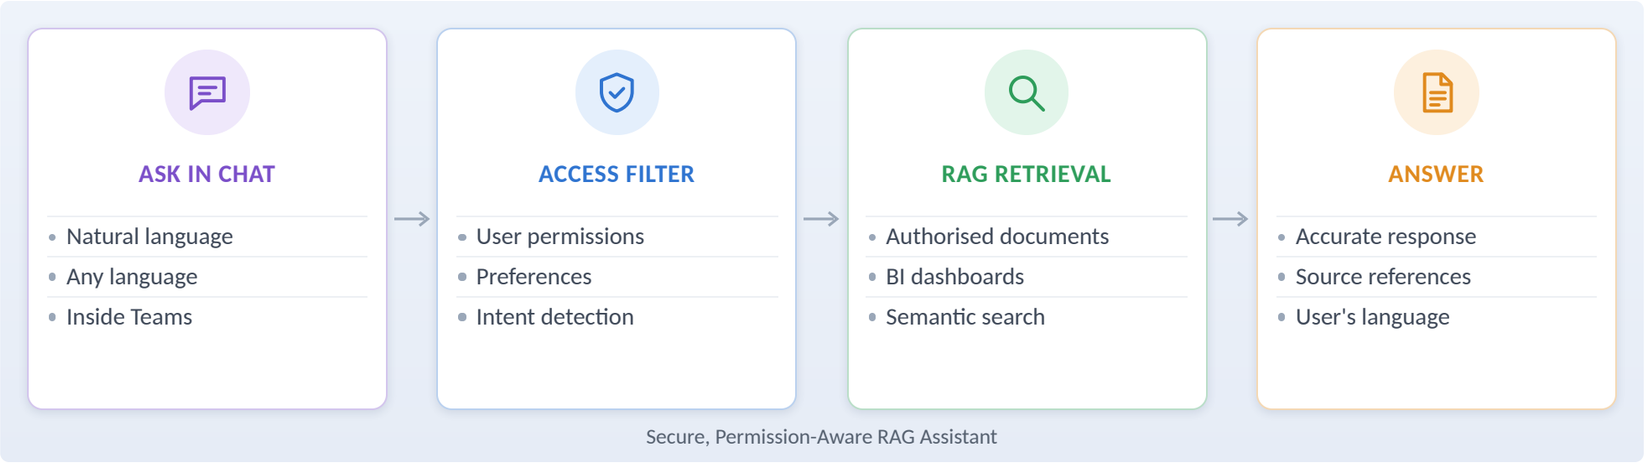

INFYSLATE

Problem statement :

- Teams generate thousands of documents, but users struggle with information overload.
- Navigating complex folder structures to find a topic or document is slow and causes search fatigue.
- Access rules and languages differ across users, making a single search experience hard to deliver.

Our Approach :

- A conversational AI assistant inside the collaboration tools employees already use (e.g. Microsoft Teams).
- Retrieval-augmented generation answers from authorised documents only, respecting each user's access permissions.
- Intent detection, BI dashboard integration and multilingual responses in the user's own language.

Impact

- 46,000+ queries answered
- 370+ active users
- Faster document discovery
- Secure, access-controlled answers

Let's Innovate Together: Connect with Infyslate Today Today
